

CAIO NASCIMENTO CAMINHA

Software Engineering Student | Specializing in Data Engineering

Email: caioncaminha@gmail.com | Phone: +55 (11) 97529-0508

LinkedIn: [linkedin.com/in/caionascimentoaminha](https://www.linkedin.com/in/caionascimentoaminha) | GitHub: github.com/Caioncaminha

Location: São Paulo - SP | Availability: Internship and Jr. | [Web Portfolio](#)

PROFESSIONAL SUMMARY

Experience as leader and developer, building **high-performance pipelines**, **integrating AI** and **virtual agents** for automation in information delivery. Proven track record in leading academic and corporate projects, achieving **proposal preparation time reductions of approximately ~90%** for sales teams (Unentel), and **reducing manual work in data collection by at least 70%** (Passa a Bola). High proficiency levels in **Prompt Engineering**, applying it daily, **increasing Agent efficiency** and **delivering features ~4x faster**. Focus on **Python**, **TypeScript**, **data engineering** (**PostgreSQL**, **Supabase**, **dbt**, **Excel**), **high proactivity**, **adaptability** and **continuous learning**. Currently working as **Pre-Sales Intern and Lead Developer** at Unentel Distribuição.

TECHNICAL SKILLS

AI: Prompt Engineering, AI Training and Virtual Agent (Custom AIC, VAs), AI Integration.

Development: Python (Pandas), TypeScript, RESTful APIs, Excel, Power BI

Databases: PostgreSQL, MongoDB, Supabase/Firebase, dbt

Methodologies: SOLID, DRY, KISS, Version Control, Clean Code.

PROFESSIONAL EXPERIENCE

Pre-Sales & Lead Developer

[Unentel Distribuição](#) | Oct/2025 - Present | São Paulo, SP - Hybrid

Designed and implemented a centralized data platform consolidating **over 20,000 SKUs**, eliminating data fragmentation in sales operations.

- **Development:** Structured ingestion workflows using **TypeScript** and **SQL** to extract, normalize and deduplicate raw supplier data, ensuring a "Single Source of Truth". Implemented **CI/CD** (**GitHub Actions**, **Vercel**)
- **Database Performance:** Optimized **PostgreSQL** query plans using GIN indexes, fuzzy matching (pg_trgm) and unaccent, achieving **response times under 200 ms** on complex search queries.
- **Data Analysis:** Implemented a **telemetry pipeline** within the database to capture high-volume search logs and "no result" queries, enabling data-driven decisions about catalog expansion and future training.
- **Business Impact:** **Reduced proposal preparation time by approximately ~90%** when compared to manual spreadsheet processes and increased quote accuracy by centralizing technical specifications.
- **AI and Agents:** **AI Training and Virtual Agent** for Zoom, using **Prompt Engineering**, FAQ correlation, and documentation. Daily use of code assistants and agents (**Gemini CLI**, **Claude Code**, **MCP**) for **productivity increase**, achieving **feature delivery ~4x faster**, and facilitating/preventing manual work.

Technical Lead - Academic Project

FIAP (Freelance) | Mar/2025 - Oct/2025 | São Paulo, SP - Hybrid

Technical leadership in MVP development for Passa a Bola, a cross-platform application built with **Flutter (Dart)** and integrated with **Firebase/Cloud Firestore**, aimed at professionalizing the women's football ecosystem.

- **Architecture & Data Modeling:** Designed the data structure in **Cloud Firestore** and application architecture, optimized for real-time performance and scalability.
- **Authentication & Security:** Implementation of **Firebase Auth** with multi-factor authentication and database security rules.
- **Team Leadership:** Coordinated development workflow using **Git** version control and clean code practices.
- **Key Results:** **MVP delivered** with complete integration (Login/Register, Homepage, Profile, Championships, Admin Panel, Geolocation, Cloud integration and MFA). **Reducing up to 70% of manual work** in data collection by automating ingestion and centralizing records.
- **Project Repository:** github.com/Caioncaminha/passabola

EDUCATION

Bachelor's Degree in Software Engineering

FIAP 2nd Year | Full-Stack Developer and DevSecOps | Expected Graduation: Dec/2028
