Location: São Paulo - SP | Availability: Internship & Jr.

PROFESSIONAL SUMMARY

Experience as leader and developer, contributing to small to medium-sized projects, notably "Passa a Bola" and "Catálogo Unentel" projects. Focus on Python, TypeScript, algorithms, and data structures. Currently working as a Pre-Sales Intern and Developer at Unentel Distribuição.

PROFESSIONAL EXPERIENCE

Pre-Sales & Lead Developer

Unentel Distribuição | Oct/2025 - Present | São Paulo, SP - Hybrid

Designed and deployed a centralized data platform consolidating 20,000+ SKUs, eliminating data fragmentation across sales operations.

- **ETL & Data Pipelines:** Architected ingestion workflows using TypeScript and SQL to extract, normalize, and deduplicate raw vendor data, ensuring a "Single Source of Truth".
- **Database Performance:** Optimized PostgreSQL query plans using GIN indexes, fuzzy matching (pg_trgm), and unaccent extensions, achieving sub-200ms response times on complex search queries.
- **Data Governance:** Enforced strict data integrity via Relational Modeling and Row Level Security (RLS); automated database maintenance tasks (cleanup/vacuum) using pg_cron.
- **Business Impact:** Reduced proposal preparation time by ~90% and increased quote accuracy by standardizing technical specifications.

Technical Leader - Academic Project

FIAP (Autonomous) | Mar/2025 - Oct/2025 | São Paulo, SP - Hybrid

Technical lead in the development of the MVP for Passa a Bola, a cross-platform application built with Flutter (Dart) and integrated with Firebase/Cloud Firestore, aimed at professionalizing the women's football ecosystem.

- **Architecture & Data Modeling:** Designed Cloud Firestore data structure and application architecture, optimized for real-time performance and scalability.
- **API Integration:** Integrated public API for automatic updates of matches and player statistics.
- **Authentication & Security:** Implemented Firebase Auth with multi-factor authentication and database security rules.
- **Team Leadership:** Coordinated development workflow using Git versioning and clean code practices.
- **Key Results:** MVP delivered with full integration (Login/Sign-up, Homepage, Profile, Championships, Admin Panel, Geolocation, Cloud integration, and MFA). Reduced up to 70% of manual work for clubs in data collection by automating ingestion and centralizing records.

Project Repository: github.com/Caioncaminha/passabola

TECHNICAL SKILLS

Development: Python (Pandas, NumPy, Matplotlib, Seaborn, Jupyter), TypeScript, RESTful APIs, Excel, Power BI

Databases: PostgreSQL, MongoDB, Supabase/Firebase, dbt

Methodologies: SOLID, DRY, KISS, Versioning, Clean Code.

ACADEMIC BACKGROUND

Bachelor's Degree in Software Engineering

FIAP – 2nd Year | Full-Stack and DevSecOps Developer | Expected Graduation: Dec/2028

CERTIFICATIONS AND COURSES

- [Design Thinking - Process](#)
- [Big Data](#)

LANGUAGES

- **Portuguese:** Native (C2)
- **English:** Intermediate-Advanced (B2+)
- **Spanish:** Basic (A2)
